TERMS TO BE USED IN DESCRIBING COLOR AND MARKS OF FOAL-COLOR

BAY-This varies from a light yellowish tan (light bay) to a dark rich Shade, almost brown, and between these a bright mahogany (blood bay). When the hair towards the lower part of the leg and hoof is black, the term "black point," to used to describe it.

BROWN -This is sometimes difficult to tell from black or dark bay: but can be decided by taking careful notice of the fine hair on the muzzle.

BLACK-If any doubt arises in determining between dark brown and black, the fine hair on the muzzle will show which is correct.

CHESTNUT-This varies from a dark liver color to a light washy yellow, between which come the brilliant red and gold and copper shades.

DUN-This varies from mouse color to a golden dun, and very generally is accompanied by black points and stripe.

GREY-This is a mixture of white hairs and black, sometimes Scarcely distinguishable from black at birth but getting lighter with age.

ROANS-There are two classes of these-**RED** or **STRAWBERRY**, produced by the intermingling of red, white or yellow hairs, and the **BLUE**, produced by intermingling of black, white and yellow hairs.

PALOMINO-Gold color, usually accompanied by white mane and tail.

PIEBALD-White and black spotted.

SHEWBALD-white and any color other than black, spotted.

MARKS - ON THE HEAD

STAR, a white mark, generally more or less rounded, in the center of the forehead; it is further described as "large," "small," "irregular," or "faint"

STRIP, a narrow white strip down the face, usually in the center and further described as "short," "broad" or "faint." **SNIP**, a white mark between the nostrils, the position and direction of which should be described.

BLAZE, a broad splash of white down the face, which may be distinct from the star and Snip or may embrace both. When very exaggerated it is sometimes called "bald-faced."

UPPERLIP and **UNDERLIP** are the names used to denote white skin at the edges of the lips.

Designate any white or glass eyes.

ON THE BODY

STRIPE, the dark line along the back or down the shoulders.

ZEBRA MARKS are the dark horizontal marks seen at the back of the arm above the knee and across the lower part of the thigh.

WHITESPOTS or **WHITE HAIRS** in any position on the body should be noted.

ON THE LEGS

WHITE HOOFS, **WHITE CORONETS**, **WHITE PASTERNS** and **WHITE FETLOCKS** are all noted. When the white extends just above the fetlock it is called a "SOCK," and when much higher a "STOCKING." All these being white, the use of the word "white" is unnecessary. If the white hair does not entirely cover the part mentioned, the shape of the white marking must be carefully described.

FOALS WITHOUT ANY WHITE ARE SAID TO BE "SOLID COLOR."

BRANDS must be noted.

IMPORTANT NOTICE TO OBVIATE CONFUSION, PLEASE INDICATE SEX OF ANIMAL TO BE REGISTERED AS FOLLOWS:

MARE for female foal.

STALLION for male foal.

GELDING, altered male.
